LE HUY

Backend-focused Software Engineer | Full-stack TypeScript

Ho Chi Minh City, Vietnam | +84 902 845 303 | huyle210525@gmail.com

GitHub | Portfolio

SUMMARY

Software engineering student building backend-heavy operational systems with TypeScript, Node.js and relational databases. Focused on transactional state machines, typed API contracts, queue-driven async workflows and automated verification gates.

EXPERIENCE

Software Engineering Intern | Trung My Tay Ward People's Committee | Jun-Aug 2026

- Built a schema-driven document workflow (Form Management) handling typed inputs, server-side DOCX generation and live preview for a corpus of 200+ legal templates.
- Enforced template-to-output consistency via automated locked/compiled verification across 213 registered documents.
- Industrial Internship grade: 10/10 (A+), as recorded by HUFLIT.

Freelance Full-stack Developer | PeaceNest | Jul-Aug 2026 (concurrent)

- Owned booking API from requirements through handoff: availability checks, server-authoritative quote snapshots, time-limited holds and confirmed bookings in PostgreSQL.
- Handled mid-project scope changes by extracting a shared booking package with typed contracts, enabling parallel front-end work without API breakage.

PROJECTS

PeaceNest | Booking and operations | github.com/lhcaps/Hotel

- Designed quote→hold→booking state machine with Drizzle ORM migrations, Redis-backed hold expiry and BullMQ worker for async cancellation cleanup.
- Implemented role-scoped admin/customer auth, OTP guest access, rate-plan pricing engine and coupon reconciliation across NestJS modules.

Parkly | Parking operations | github.com/lhcaps/parkly

- Built gate-session lifecycle (entry capture → operator review → exit) with Express, Prisma/MySQL and a custom Redis ownership lock for concurrent lane coordination.
- Added BullMQ outbox worker for device-health polling and session audit, with tenant-scoped middleware and idempotency guards.

Form Management | Document workflow | github.com/lhcaps/Form-Management

- Implemented typed Zod contracts for template inputs, Handlebars-driven DOCX compilation and a 213-item locked/compiled consistency gate.

SKILLS

TypeScript, JavaScript, Node.js, NestJS, Express, REST APIs, PostgreSQL, MySQL/MariaDB, Prisma, Drizzle, Redis, BullMQ, Docker, GitHub Actions, Playwright, Vitest

EDUCATION

HUFLIT | B.Sc. Information Technology (Software Engineering) | Expected 2027 | GPA 2.99/4.00

IELTS Academic 6.5 (2023)
