LE HUY

Full-stack Software Engineer | Backend-focused TypeScript

Ho Chi Minh City, Vietnam | +84 902 845 303 | huyle210525@gmail.com

GitHub | Portfolio

SUMMARY

Software engineering student building end-to-end operational workflows with React, Next.js, TypeScript and Node.js. Focused on cross-layer data consistency, typed API contracts, responsive interfaces and practical automated verification.

EXPERIENCE

Software Engineering Intern | Trung My Tay Ward People's Committee | Jun-Aug 2026

- Built Form Management: a schema-driven document workflow with React form inputs, live preview rendering and server-side DOCX generation for 200+ legal templates.

- Designed reusable form components from Zod schemas, enabling non-technical users to fill structured legal fields with client-side validation.

- Industrial Internship grade: 10/10 (A+), as recorded by HUFLIT.

Freelance Full-stack Developer | PeaceNest | Jul-Aug 2026 (concurrent)

- Developed customer-facing booking flow (search → quote → hold → confirm) and admin dashboard with Next.js, integrating NestJS APIs and real-time hold-status updates.

- Coordinated requirements changes across front-end and API layers by maintaining shared TypeScript contracts in a monorepo.

PROJECTS

PeaceNest | Booking and operations | github.com/lhcaps/Hotel

- Built responsive Next.js customer portal and admin dashboard with role-scoped views, availability calendar and booking-detail pages backed by NestJS and PostgreSQL.

- Integrated server-authoritative pricing, Redis-backed hold expiry and BullMQ async workers; modeled booking lifecycle with Drizzle ORM migrations.

Parkly | Parking operations | github.com/lhcaps/parkly

- Implemented operator review dashboard with React, shadcn/ui and i18n; connected to Express API for gate sessions, lane status and device-health monitoring.

- Used Prisma/MySQL for session persistence and Redis/BullMQ for background worker, outbox processing and concurrent lane-lock coordination.

Form Management | Document workflow | github.com/lhcaps/Form-Management

- Built schema-to-form rendering pipeline: Zod schemas drive React inputs, client validation and server-side Handlebars DOCX compilation with 213-item consistency verification.

SKILLS

TypeScript, JavaScript, React, Next.js, Node.js, NestJS, Express, REST APIs, PostgreSQL, MySQL/MariaDB, Prisma, Redis, Docker, Playwright, Vitest, GitHub Actions

EDUCATION

HUFLIT | B.Sc. Information Technology (Software Engineering) | Expected 2027 | GPA 2.99/4.00

IELTS Academic 6.5 (2023)
