Le Huy

Software Engineer

Full-time Junior Software Engineer

CAPABILITY SUMMARY

Backend-leaning full-stack, from contract to release.

+ Governed domain contracts and typed product boundaries
+ Asynchronous execution, deterministic data, and operational handoffs
+ Scoped implementation, verification harnesses, and release evidence

SYSTEMS

Five systems. Five different failure surfaces.

01 **Form Management**

FLAGSHIP / DOCX Contract

The DOCX contract decides what every form is allowed to become.

02 **VisionFlow Studio**

FLAGSHIP / Queue Handoff

The request ends here. The job keeps moving.

03 **Booking & Operations Platform**

FLAGSHIP / Fourth Pricing Change

Pricing changed again. The release loop already knew the route.

04 **Parkly**

SUPPORTING / Manual Review Handoff

Low confidence is a handoff, not a shrug.

05 **TFT Local Copilot**

SUPPORTING / Incomplete runtime boundary

A local RAG experiment assembled far enough to expose its missing seams.
